

ABSTRACT

A coin collection system for a gaming machine comprises a coin outlet for dispensing coins and a coin tray beneath the coin outlet. In one aspect of the invention, a movable member is coupled to the gaming machine and is operable to assist in guiding the dispensed coins from one of the coin outlet and the coin tray to a coin collection cup. In another aspect, a guiding member is positioned proximate to the coin outlet and is operable to divert the dispensed coins away from the coin tray and into a coin collection cup. In a further aspect, a mechanical element holds a coin collection cup in front of the coin tray so that the coins dispensed into the coin tray can be scooped into the held coin collection cup. In yet another aspect, the coin collection cup itself is sized to fit within the coin tray.
